

Driving Prediction Forward: SOTAX announces partnership with Triskelion for In-vivo Predictive Dissolution Testing

Regulatory support continues to grow for a biorelevant dissolution test that better represents in-vivo performance. In order to support this initiative, SOTAX and Triskelion have signed a partnership agreement whereby SOTAX will be the sales and service provider for Triskelion's unparalleled TIM gastrointestinal simulation technology in the Americas.

November 2019: Over the last 25 years, Triskelion's core technology, TIM, has led the way in the realistic simulation of the gastrointestinal (GI) processes. TIM is a computer-controlled model that realistically simulates the in-vivo process. In contrast to static digestion models and methods, TIM is a dynamic GI simulation. Because of this, it is highly predictive, and it is considered the most advanced digestion model.

SOTAX, the world's leading dissolution instrument and service provider, has strong roots in in-vivo/in-vitro correlation. The large Americas network of service engineers and certified SOTAX partners will assist TIM users throughout the instrumentation life cycle – from analytical services to on-site installation, qualification, training, preventive maintenance, and uncomplicated troubleshooting support.

TIM Users report a significant decrease in the need for animal studies, successfully shorten time-to-market, and better support their validation of clinical outcomes. The combination of leading Triskelion GI simulation and the established SOTAX support network will allow pharmaceutical companies to efficiently work towards the replacement of human bioequivalence / bioavailability studies resulting in streamlined research, greatly benefiting pharmaceutical R&D groups and, ultimately, patients.

About SOTAX:

SOTAX is the international leader in the development and manufacturing of fully automated systems for dissolution testing, sample preparation, and physical testing of pharmaceutical dosage forms. With over 40 years of sustained growth, SOTAX is now the world's largest company focused on the dissolution testing space.

About Triskelion:

Triskelion has unique capabilities to apply the necessary inter-disciplinary and cross-sectorial approach. With our technical expertise, high knowledgeable teams and bespoke solutions we are able to fully use and utilize our capabilities to determine the properties of any food, pharmaceutical or (agro)chemical product.
